## MedMinder keeps you safely on track with all your medications.

**At last! A medication management system designed to ensure safety and compliance.**

The MedMinder™ personal medication dispenser is the most effective and affordable solution available to enhance medication adherence. Besides enabling personal interventions from caregivers, it offers a sense of well-being.

**Ensure the correct dose is always taken.**

MedMinder's special lock box feature ensures that **ONLY** the correct medication compartment opens at the designated dosage time. The rest remain securely locked. Dispenser compartments can also accommodate many different types of pills. MedMinder's user-friendly interface has no buttons or confusing digital readouts.

**Refill trays in advance.**

MedMinder offers convenient refill trays that can be filled in advance and placed into the dispenser with ease, reducing the possibility of medication errors. This feature is especially useful for people with chronic conditions and complicated drug regimens.

**Leave a custom greeting!**

Caregivers can record voice messages on the MedMinder so loved ones will hear a familiar voice. Custom greetings can be made for daily medication reminders, positive feedback or for special occasions. Typed greetings can also be left that the MedMinder will convert into voice format.
